

There are four species of Australian wild-caught abalone

Blacklip, Greenlip, Brownlip and Roe’s Abalone are wild-caught, by hand, causing no damage to the surrounding environment.

Blacklip Abalone
Haliotis rubra rubra

Total Supply Tonnage
(2018-19)

2230 t

Brownlip Abalone
Haliotis rubra conicopora

Total Supply Tonnage
(2018-19)

22 t

Greenlip Abalone
Haliotis laevis

Total Supply Tonnage
(2018-19)

513 t

Roei Abalone
Haliotis roei

Total Supply Tonnage
(2018-19)

61 t

The southern Australian coastline provides the perfect growing environment for wild abalone.

Where do they grow?

Although abalone grow in many places around the world, the best quality and most succulent abalone grow around the 30 - 40 degrees south latitude.

We have fisheries in Western Australia, South Australia, Victoria, New South Wales and Tasmania.

Here is a map showing our wild fisheries and species caught in southern Australia.
